

The Project

The redevelopment and opening of Soham Train Station to passengers for the first time since 1965.

Our part:

- Contracted by JMS to deliver all surfacing and civils inclusive of Section 278 works, car parks and access roads including civils, drainage, and thermoplastic line marking.

Our successes:

- Prompt mobilisation following tender stage.
- Strong relationships with a dedicated supply chain ensured material was sourced and delivered to site from outside of the UK at a time of material and resource shortages throughout the UK.
- No impact to program of works due to material lead times and material shortages through strong supply chain relationships.
- Fast and positive response to design change at midway point of program to maintain critical path.
- Collaborative working between all parties on site to achieve the common objective.
- No snagging of works through promotion of our 'Right First Time' culture.
- Delivery of the project for a new community and improving transport links and the economy in a new region of the county.
- Soham Station opens on time to passengers for the first time since 1956.

'We've got the brass band; we've got the tent; we've got the crowd of excited locals, we've got the Mayor It is the opening of Soham'.
